PROFILE

MSc Management (Digitalisation and Big Data) candidate at the University of Bristol with a finance and international-trade first degree (GPA 87.4/100, Outstanding Graduate). Hands-on data analyst: I clean, validate and analyse million-row datasets with SQL and Python, and turn them into revenue, category and KPI reporting. Currently delivering an applied research project with UK partner organisation The Talent Lighthouse, combining research design, evidence review, questionnaire development and an ethics-aware process. I also build working software end to end, which gives me an engineering mindset for data quality and automation. Seeking Data Analyst, BI Analyst, Business Analyst or Finance Data Analyst graduate roles in the UK.

Portfolio highlights: 1.6M+ raw records cleaned · 524,878 analysis-ready transactions · £10.6M+ sales analysed · 1.23M App Store records profiled

CORE SKILLS

- **Data cleaning & analysis:** SQL (MySQL, SQLite), Python (pandas, NumPy, matplotlib, seaborn), data profiling, validation rules, duplicate/missing-value handling, reproducible ETL pipelines for million-row datasets; DataGrip, PyCharm.
- **BI & reporting:** Excel (PivotTables, Power Query), Power BI reporting concepts, KPI design, revenue and trend reporting, insight storytelling for non-technical stakeholders.
- **Finance & business:** econometrics and statistics, accounting for decision making, portfolio management, risk management and international finance coursework; receivables and reconciliation experience; business-question framing.
- **Applied research:** research design, literature and evidence review, questionnaire design, descriptive statistics and thematic-coding plans, research-ethics-aware process, partner-facing communication.
- **Software (supporting):** React, TypeScript, Next.js, Supabase (Auth/Postgres, RLS), Vercel; Swift/SwiftUI macOS apps; Git/GitHub.

EDUCATION

University of Bristol

Sep 2025 – Sep 2026 (expected)

MSc Management (Digitalisation and Big Data)

Bristol, UK · taught and assessed in English

- All 120 taught credits passed at first attempt (provisional marks); strongest unit: Strategy, Finance and Accounting for Management (75, distinction level).
- Study focus: big-data analytics, digitalisation and value creation, research methods, operations and marketing management.
- Dissertation: Applied Extended Project with partner organisation The Talent Lighthouse (see Applied Research below).

Central University of Finance and Economics & Victoria University

Sep 2021 – Jul 2025

BSc International Trade and Economics (Financial Risk Management)

GPA 87.36/100 (3.7/4.0) · Outstanding Graduate 2025 · Second Class Academic Scholarship 2022 & 2023

- Finance and quantitative modules: International Trade (97), Macroeconomics (96), Econometrics (94), Statistics for Business & Marketing (93), International Economics (92), Accounting for Decision Making (90), Portfolio Management (88), Corporate Finance (83), Risk Management and Insurance (83), International Finance (82).

APPLIED RESEARCH — MSC DISSERTATION PROJECT

Applied Extended Project — partner: The Talent Lighthouse

May – Sep 2026 (in progress)

Workplace Wellbeing in the Education-to-Employment Transition

University of Bristol Business School · five-person research team working with the partner organisation's founder

- Producing evidence-based insights and practical recommendations for The Talent Lighthouse, a UK talent-development organisation, on how employers can support early-career professionals' workplace wellbeing (0–3 years after graduation).
- Helped narrow a broad partner brief on early-career mental health into a feasible, non-clinical workplace-wellbeing research question through structured supervisor and partner meetings.
- Co-developed a literature-informed mixed-methods questionnaire across six documented iterations, with branching for students vs early-career professionals and items on transition pressure, belonging, AI-related uncertainty and support accessibility; built a static no-data-collection prototype for team and supervisor review.

- Drafted ethics documentation for university review — participant information sheet, consent form and recruitment materials — using an anonymised, minimal-data design (no clinical questions, no identifying information); data collection to proceed only after formal ethics approval.
- Reviewing academic literature and industry evidence (e.g. graduate labour-market and wellbeing reports) to build the evidence base behind the recommendations.

EXPERIENCE

Data Analysis Intern — Licheng Holdings Group, Data Assets Department

Jan – Mar 2025

Jinan, China

- Benchmarked six core workflows in an internal Data Management System, creating baseline metrics for process optimisation and reporting improvement.
- Supported the integration and rule tuning of a DeepSeek-enabled reporting module, contributing to a reported ~40% improvement in report-generation efficiency and field-matching accuracy.
- Produced 8+ test cases and SOPs for data-governance and permissions workflows, helping reduce manual rework by ~20%, and worked with product, operations and sales teams to roll out updated reporting workflows across three departments.

Sales Intern — Aerospace Information (Shandong) Technology Co., Ltd.

Jul – Aug 2021

Jinan, China

- Recovered RMB 100,000+ in receivables within one month; built an Excel tracker covering 4,000+ customer records and used response data to improve call-to-payment conversion by 4–5 percentage points.
- Prepared daily reconciliation records and weekly accounts-receivable summaries for the finance team.

SELECTED DATA PROJECTS

UK Retail Transactions — SQL ETL, Data Cleaning & Revenue Analysis (GitHub)

2025

- Cleaned and validated 524,878 analysis-ready transactions from ~1.6M raw records using SQL rules (duplicates, invalid stock codes, missing descriptions, non-positive quantity/price) and converted Excel serial dates to SQL datetimes.
- Automated MySQL-to-Python extraction and analysed £10.6M+ in sales with pandas/matplotlib, producing monthly revenue-trend and top-products reporting from a reproducible cleaning pipeline.

Apple App Store — SQL & Python Data Cleaning and Analysis (GitHub)

2026

- Cleaned and analysed a 1.23M-record dataset in SQLite/Python, building quality flags for missing values, date validity, price logic and size anomalies, plus derived fields (e.g. Size_MB, Quality_Issue_Count); flagged uncertain records instead of overwriting them.
- Quantified market structure — 1.13M free vs 102K paid apps, Games the largest category (193K) — and documented the full cleaning-to-insight workflow.

SOFTWARE & PRODUCT PROJECTS (PERSONAL PORTFOLIO)

- **Personal training web app (in progress):** full-stack Next.js/TypeScript app with Supabase Auth and Postgres, row-level security and SQL migrations, deployed on Vercel.
- **Native macOS tools:** Swift/SwiftUI menu-bar hydration reminder with local JSON persistence, LaunchAgent auto-start and multi-display reminders; Python time-logging tool with CSV/Markdown export and Notion sync.
- **Bilingual portfolio website:** React/TypeScript/Vite site on GitHub Pages with project case studies, SQL/Python samples and reporting visuals.

AWARDS

- Outstanding Graduate, Central University of Finance and Economics (2025).
- First Prize (university level), China National Undergraduate Innovation, Creativity and Entrepreneurship Challenge (2023).
- Second Prize (university level), CMAU Market Research and Business Planning Competition (2023).
- Second Class Academic Scholarship, CUFU (2022 and 2023).

ADDITIONAL INFORMATION

- **Languages:** Mandarin Chinese (native); English (professional working proficiency — currently studying and assessed in English at a UK university).
- **Right to work:** currently in the UK on a Student visa (term-time work capped at 20 hours/week); right to work verifiable via the official GOV.UK share-code check; planning to apply for the Graduate visa on course completion. Available for full-time roles from September 2026.
